UCC IN TRANSITION

Change is in the air for Union Christian College, with the execution of long-awaited construction projects during this centenary year.

Around half a dozen major building projects are either in progress or on the anvil on the campus. The infrastructure enhancement in the AB block envisages the facilitation of cutting-edge research and novel educational ventures. The AB block, which currently has three lecture halls, is being upgraded to house two seminar halls and a sophisticated

instrumentation research centre on the new floor being constructed above the existing structure. This project actualizes our desire to keep pace with the emerging teaching and research technologies. The seminar halls and the research centre will cater to the requirements of expanding research areas and methodologies. This will also make possible alliances with international knowledge communities through international seminars and colloquia. State of the art facilities are being developed here to offer quality education to all our students and scholars, who hail mostly from the rural areas

of the state. The improved facilities would also enable us to host more international student-teacher exchange programmes on the campus. Maximum exposure to world-class education and research, in concurrence with the NEP and UGC parameters, will be possible at Union Christian College with the completion of the new seminar halls, making

international web conferencing and live interactions with eminent scholars and scientists a reality for our students and researchers. This is a transition period for UCC, with new challenges and enduring promises.
